

Minster Press Remanufacturing

Remanufactured to meet or exceed original OEM specifications.

Minster Press Remanufacturing

With more than 125 years of manufacturing experience, Nidec Minster has been remanufacturing presses for more than 70 years.

Take full advantage of the productive potential in your older Minster presses. Have them remanufactured and their performance enhanced with the latest techniques and equipment. And don't compromise the results. To truly remanufacture your Minster, bring it back to the people who built it in the first place... bring it home to Minster.

Nidec Minster recently opened a 25,000 sq. ft. addition dedicated to repair parts machining and remanufacturing. In addition, the NP&A Service Center in Queretaro, Mexico has expanding with a new facility that will not only increase its warehouse for common repair parts, but will also greatly increase capabilities for remanufacturing larger Minster presses on site.

Make Your Press Better Than New

With tremendous press engineering capability at its disposal, Minster has the ability to modify your press to better meet your current needs. These modifications may include changes to the press' original specifications and/or incorporating newer technologies into your older press. Depending on your press type and its condition, potential modifications include:

- Increased Energy Ratings
- Stroke Change
- Shutheight Change
- Increased Speeds
- Reduced Stopping Times
- Control Upgrades

You Have Our Guarantee

We back up our promise of quality with a parts and labor warranty that is unequalled in the industry. New mechanical components are covered for a full two years, and new electrical, pneumatic, and hydraulic parts are warranted for one year.
